PROFESSIONAL SUMMARY

Computer Science undergraduate and aspiring Frontend Engineer specializing in JavaScript and React.js. Passionate about crafting intuitive, responsive user interfaces and translating complex design concepts into pixel-perfect code. Leverages a strong foundation in algorithms to solve problems creatively while maintaining a sharp focus on User Experience (UX). Committed to writing clean, reusable code and building accessible, scalable web applications.

TECHNICAL SKILLS

Languages and Frameworks | Python, React.js, Java, C
Database | SQL
Methodologies and Tools | Git, Visual Studio Code, IntelliJ, Postman, Figma, JIRA, Agile/Scrum, OOP, SDLC, Distributed Systems, Data Structures
Soft Skills | Communication, Analytical Thinking, Team Collaboration, Adaptability

EDUCATION

Sri Lanka Institute of Information Technology — Sri Lanka
B.Sc (Hons) in Computer Science — Nov 2023 - Present

Sujatha Vidyalaya — Matara
GCE Advanced Level (Physical Science Stream) — 2008 – 2022

PROJECTS

Mentora — **Jul 2025 – Oct 2025**
AI Career Guidance App (UI/UX Concept) | Group Project — *React Native, HCI Principles*

- Engineered a cross-platform mobile application using React Native, applying strict Human-Computer Interaction (HCI) principles for maximum usability.
- Designed an accessible navigation structure validated through user testing to simplify complex career data for students.

Mobile Repair Shop Management System — **Jul 2024 – Oct 2024**
Mobile Repair Shop Management System | Group Project — *React.js, Dashboard Design*

- Built a Single Page Application (SPA) featuring a complex Admin Dashboard for visually tracking inventory and repair jobs.
- Developed a public-facing customer portal with real-time status tracking (In Queue → Processing → Repaired), utilizing React Hooks for efficient state management.

MORKS **May 2024 – Jul 2024**

Dermatology & Beauty Care Platform | Group Project *React.js, UI/UX Design*

- Competition: IDEALIZE 2024 (Team MORKS) – Organized by AIESEC, University of Moratuwa.
- Developed a web application prototype connecting users with dermatologists for remote advice and skin solutions.
- Designed an interactive Video Tutorial UI for makeup and skincare guides, ensuring a seamless media playback experience.
- Focused on creating a trustworthy, accessible interface for booking consultations and viewing professional medical content.

Kinetic Kicks **Nov 2023 - Present**

Power-Generating Shoe | Group Project React Native, ESP32, Embedded Systems, Bluetooth

- Award-Winning Project: Engineered the mobile interface for a smart, sustainable shoe. Built a responsive React Native dashboard that communicates with embedded hardware via Bluetooth (BLE) to visualize real-time power generation data.
- Designed a user-friendly experience that bridges the gap between raw hardware data and consumer-facing software, focusing on accessible data visualization and intuitive navigation.

TestLang++ **Oct 2025 – Nov 2025**

Custom DSL and Compiler for API Test Automation | Individual Project Java, JFlex, CUP, JUnit 5, Spring Boot

- To streamline the API testing workflow, developed TestLang++, a specialized automation tool that converts lightweight scripts into robust JUnit 5 test cases.
- Engineered the core compiler architecture using Java and Spring Boot, implementing precise error reporting and validation logic to ensure code quality.
- Demonstrated ability to build developer-facing tools and abstract away complex backend logic into simple, user-friendly syntax.

Distributed Payment Processing System **Jul 2025 – Oct 2025**

Fault-Tolerant Distributed System | Group Project Python, gRPC, Protocol Buffers, JSON, Distributed Algorithms

- Engineered a fault-tolerant distributed payment processing system using Python and gRPC to handle concurrent transactions across multiple nodes.
- Implemented a custom consensus mechanism to ensure data consistency and ledger synchronization, utilizing JSON for persistent storage.
- Ensured high availability with automated node recovery and log replication, guaranteeing correct execution and availability even during network partitions or server failures.

Advanced Naval Battle Simulator **Nov 2023 – Apr 2024**

C-Based Simulation System | Individual Project C, Simulation programming

- Built a Naval Battle Simulator using C language to model ship combat.
- Wrote the code to handle game logic, such as calculating where shots land and tracking damage to the fleet.
- Designed strategic gameplay features with difficulty levels that get harder as the game progresses.

Personal Portfolio Website **Jan 2026**
Responsive Front-End Portfolio Website React.js Tailwind CSS, UI/UX Design

- Designed and developed a fully responsive personal portfolio to showcase technical projects and skills.
- Utilized **React.js** for a modular, component-based architecture and Tailwind CSS for modern styling and rapid UI development.
- Implemented a glassmorphism design aesthetic and ensured seamless performance across mobile and desktop devices.

ACHIEVEMENTS

- Most Innovative Idea, INNOVELEC 2025 — SLIIT IEEE PES (Kinetic Kicks)
- 1st Runners-Up, SDG Youth Challenge 2024 — University of Kelaniya (Kinetic Kicks)
- 5th Place, Startup Spark: Techno 2024 — IESL Student Chapter, University of Moratuwa (Kinetic Kicks)
- Finalist, SSD 2025 SDG Project Competition — Auckland International Campus
- Participant: IDEALIZE 2024 — AIESEC, University of Moratuwa (Team MORKS)

CERTIFICATIONS

- Introduction to Programming Using Python – University of Moratuwa
- Artificial Intelligence - Beginners Guide – Simplilearn
- Web Design for Beginners – University of Moratuwa

VOLUNTEERING

- Secretary Team Member – SLIITXtreme 4.0 (IEEE Computer Society of SLIIT)
